SOVEREIGN AI BRAIN · UPDATE INSTRUCTIONS

7.0.12 — Ledger

A release about the register — the thing that makes a claim about your practice true.

Version	7.0.12
Released	14 November 2026
Download size	94.7 MB
sha256	`c9b7fe1aad4369b52bd9cd1935b6a21877772f6afbd3bd0b1bfd1a86efd79f35`

What this update does

A number on a screen that nothing behind it wrote is a number somebody will act on. Most of this release exists to stop that, and the largest part of it is a new signed-in client for the Practice edition.

`centurion practice-desk serve`	The practice desk: one named person per session, a passkey instead of a password, and no way to mint a session from the command line. It opens on four instrument panes, and the panes with no register behind them say so in words rather than showing a zero.
`centurion practice-desk role`	Changes what a person is allowed to be. Only a partner may sign, so only a partner may hand that out or take it away — and the last partner who can sign cannot be demoted, because the practice would be left with nobody who may sign.
`centurion practice-desk audit`	Every admission, signature, assignment and refusal, with names rather than tokens. A person who has left keeps their name on their rows.
`centurion backup --status`	The backup ledger: the last archive, whether it was verified, and when the next one is due. An unreadable record reports as unreadable and overdue, never as zero days ago. Archives are encrypted at rest.

The licence is now read at boot, an edition cannot be re-bound across editions, and the seat limit exists in exactly one place — the sentence a partner reads when they try to add a person is the sentence in the agreement.

How to install

1. Sign in and open **Account → Get Brain**. The download sits at the top of the page.
2. Double-click the downloaded file and choose **Install**. Fedora may ask for your password — that prompt is your computer, not us.
3. Reopen **Sovereign AI Brain**. It sets its own services up and starts them. Nothing else to run.
4. Reopening is enough. No reboot is required.

Check the file you downloaded

Compare the hash of the file you received against the sha256 above. On Fedora:

```
sha256sum ~/Downloads/centurion-brain-7.0.12-1.fc44.x86_64.rpm
```

The two strings must match exactly. The package is signed with Centurion's release key; `rpm -K` reports digests signatures OK.

WHAT IS UNTOUCHED

Your data, your Soul, your sessions.

This update replaces code. It does not read, move or reset your memory, your conversations or your configuration.

If anything is unclear or the update does not take, reply to the email this arrived with and say what you saw. A description of the failure is worth more than a screenshot.
