CENTURION · SOVEREIGN AI BRAIN

Updating to Sovereign AI Brain 7.1.0

Eighteen languages, and the one you choose is the one that stays.

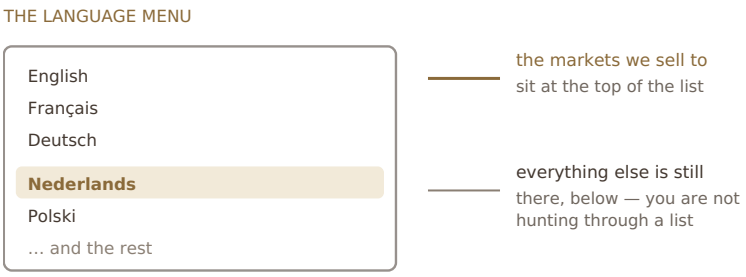

14 November 2026

What’s new

This release is about being spoken to in your own language — on the screen, and in the answers you get back.

Dutch and Polish, in full

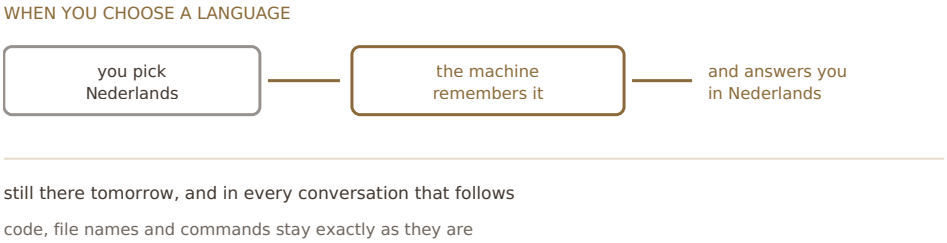

Nederlands and Polski join the interface complete, not partly: every string translated, every placeholder intact, nothing quietly falling back to English halfway down a page. The menu now opens with the languages this business sells into.

Dutch and Polish are now in the menu, complete — every interface string, not a half-translated screen that falls back to English mid-sentence. The list opens with the languages the business actually sells into.

The choice belongs to the machine

Choosing a language used to change the browser tab and nothing else. It is now written to the machine and read by the agent, so the setting survives a restart and the answers come back in the language you read in.

The choice is written to the machine, not to a browser tab — close everything, restart, it is still Dutch. The agent is told which language you read in, so it replies in it without being asked and without announcing it.

Spoken in the right accent

Voice replies now match the language you have chosen. An accent you have set yourself still wins — a voice is a preference, not a default the machine corrects.

What this does not change

Your settings, your conversations, your Missions and your connections are untouched. If English is your language, this update is invisible: nothing on your screen moves.

Code, file paths, tool names and commands are never translated, in any language. A translated command does not run.

How to update

1. Sign in and open **Account → Get Brain**. Your download sits at the top of the page.
2. Double-click the downloaded file and choose **Install**. Fedora may ask for your password — that prompt is your computer, not us.
3. **Reopen Sovereign AI Brain.** Choose your language once, from the menu at the bottom of the sidebar. Nothing else to run.

> **Check the download if you like.** The sha256 above is the exact file we published: `bfecab1316f2cda f47fbbb41da641972fe41debdaa20a36677eab13b168c2b50` — about 94.9 MB.
>
> **Signed with Centurion’s release key.** No reboot is needed — reopening the Brain is enough.
