# Updating to Sovereign AI Brain 7.1.1

Twenty-four languages: every official language of the European Union except Irish, plus Russian.

14 November 2026

## WHAT'S NEW

Eleven languages was a product, not a coverage claim. The European Union has twenty-four, and a practice in Ljubljana, Riga, Valletta or Zagreb opened the machine and found its own language missing. This release closes that.

### Fourteen languages, complete before they appear

Bulgarian, Czech, Danish, Greek, Estonian, Finnish, Croatian, Lithuanian, Latvian, Maltese, Romanian, Slovak, Slovene and Swedish. Each is a full interface catalogue — every string present, every placeholder intact — so nothing appears in the menu and then answers in English halfway down the page.

> English · Français · Deutsch · Nederlands · Polski · Español · Italiano · Português · Русский · Magyar · Български · Čeština · Dansk · Ελληνικά · Eesti · Suomi · Hrvatski · Lietuvių · Latviešu · Malti · Română · Slovenčina · Slovenščina · Svenska

### Irish is out, deliberately

The Irish market is served in English. A catalogue nobody reads is maintenance, not coverage. If that changes, it can come back.

### Seven languages removed

Japanese, Korean, Turkish, Ukrainian, both Chinese variants and Afrikaans were offered with no market behind them. They are gone, and a leftover setting naming one of them is now refused rather than quietly rendered in English.

## HOW TO UPDATE

1. Open **Account → Get Brain**. The 7.1.1 download sits at the top of the page.
2. Double-click the file and choose **Install**. Fedora will ask for your password — that is your computer, not us.
3. Reopen Sovereign AI Brain. Your language choice is already there; nothing to set up again.
4. Check the download if you like: the sha256 printed on the release page is the exact file we published.

## WHAT IS NOT YET TRUE

The website publishes nine languages, and the argument on the accountants page is written in four of them. A practice in Ljubljana can work in Slovene today; it cannot yet read the sales page in it. The fourteen newest interface translations were produced without a translator's budget and carry a native-review note in their files. Saying so is cheaper than a customer finding the one sentence that reads wrong.

---

No reboot is needed — reopening the Brain is enough. Your data, your Soul and your sessions are untouched. Code, file names, commands and error messages are never translated: a translated command does not run.
